# **HPTO 8**

MICROPROCESSOR
CONTROLLED
HYDRAULIC
CLUTCH

The HPTO8 is a hydraulically applied dry friction clutch for diesel engine applications. Its hydraulic piston design eliminates the need to adjust the clutch throughout its wear life.

## **Clutch Controller**

The microprocessor based clutch controller allows for a consistent startup process every time, extending the life of the clutch.

The start-up sequence (patent pending software) involves a series of pulses delivering up to 200% peak engine torque. This means the HPT08 can start equipment with significant inertia or even under partially jammed conditions.

The HPTO8 package increases equipment reliability and profitability with a consistent startup process every time.

For application or technical assistance please contact either PT Tech or PT Tech Europe.

## **Features & Benefits:**

- Self adjusting for wear
- "Push button" start-up
- No Pilot bearing
- Can be remotely controlled
- Monitors and reports system status
- Prevents operator clutch abuse
- Internal rotary union allows for inline applications
- Designed to absorb shockloads
